- All parts and materials are supplied in a singular crate
- Custom Rooftop Guardrail Systems are available upon request, size can be altered to fit most access points

Reasons Why HatchGuard is the Solution for You:

The simplicity of HatchGuard allows for this system to be integrated with virtually all roof openings. This rooftop hatch guard system comes standard with a spring-loaded gate to ensure that this fall prevention system is in a safe, operating, closed position at all times. Designed specifically to allow for the safe exit and entry of employees onto rooftops this fall prevention guardrail system will be a perfect addition to your rooftop safety systems.

Like all of our rooftop guardrail kits HG-KIT-08 is designed in order to fit into a single crate; most parts are pre-assembled with easy to follow instructions and a single tool for installation. This free-standing, modular system is constructed with corrosion resistant lightweight aluminum tubing and utilizes counter weighted baseplates. It requires no rooftop penetration, which will help to make sure that your roof will remain intact; so you will not have to worry about any unexpected leaks occurring from using this system
